

CAFS tip

Art.-Nr. 60637633

The AWG Turbo-CAFS nozzle is suitable for use with the Compressed Air Foam System (CAFS). The air/water foam mixture is transported to the point of application through hoses as usual. In accordance with the fluidic design of the AWG Turbo CAFS nozzle, air bubbles are not destroyed when the jet is discharged. This ensures a bundled jet with a long throwing distance. The AWG Turbo CAFS is opened and closed by a bow handle similar to the AWG Turbo-Nozzle. The coupling connection can also be rotated under pressure.
