

## Druckbegrenzungsventil DIN 14380 - B

N° d'art. 20190534

The pressure relief valve is used to protect hose lines and fittings from overloading. The pressure relief valve should limit the operating pressure for this purpose. If the set value is exceeded, the valve laterally controls water to the outside. At only 0.5 bar above set pressure, the pressure relief valve opens within only 0.1 seconds to adjust the pressure. The required operating pressure between 2 and 16 bar is shown at the illuminated pressure gauge.

## Données techniques

Longueur [mm]:	255
Largeur [mm]:	200
Hauteur [mm]:	195
Poids [kg]:	5.2
Entrée:	Storz 75 (B)
Entrée rotative:	ja
Pression de service maximale admissible [bar]:	16
Sortie:	Storz 75 (B)
Sortie rotatif:	oui
Norme applicable:	DIN 14380
Manomètre:	ja
